

POULTLY MANURE CONCENTRATE FEEDING TECHNOLOGY

Directions:

1.Dry immediately under the sun for 2-3 days

If this feces is not dried immediately, ammonium which is the source of protein nutrition will be missing.

2.Grind.

Although poultry feces include a high level of nutrition, it is very hard for the animals to digest it. So it is better to grind it before using it for feeds.

3.Remove concentrate by 30-35%

We can mix it with other concentrate for cost cutting.

For example:
