

L. D. Landau and E. M. Lifshitz

FLUID MECHANICS

Second Edition 1987.

Table of Contents

I. IDEAL FLUIDS

- §1. The equation of continuity
- §2. Euler's equation
- §3. Hydrostatics
- §4. The condition that convection be absent
- §5. Bernoulli's equation
- §6. The energy flux
- §7. The momentum flux
- §8. The conservation of circulation
- §9. Potential flow
- §10. Incompressible fluids
- §11. The drag force in potential flow past a body
- §12. Gravity waves
- §13. Internal waves in an incompressible fluid
- §14. Waves in a rotating fluid

II VISCIOUS FLUIDS

- §15. The equations of motion of a viscous fluid
- §16. Energy dissipation in an incompressible fluid
- §17. Flow in a pipe
- §18. Flow between rotating cylinders
- §19. The law of similarity
- §20. Flow with small Reynolds numbers
- §21. The laminar wake
- §22. The viscosity of suspensions
- §23. Exact solutions of the equations of motion for a viscous fluid
- §24. Oscillatory motion in a viscous fluid
- §25. Damping of gravity waves

III. TURBULENCE

- §26. Stability of steady flow
- §27. Stability of rotary flow
- §28. Stability of flow in a pipe
- §29. Instability of tangential discontinuities

- §30. Quasi-periodic flow and frequency locking
- §31. Strange attractors
- §32. Transition to turbulence by period doubling
- §33. Fully developed turbulence
- §34. The velocity correlation functions
- §35. The turbulent region and the phenomenon of separation
- §36. The turbulent jet
- §37. The turbulent wake
- §38. Zhukovskii's theorem

IV. BOUNDARY LAYERS

- §39. The laminar boundary layer
- §40. Flow near the line of separation
- §41. Stability of flow in the laminar boundary layer
- §42. The logarithmic velocity profile
- §43. Turbulent flow in pipes
- §44. The turbulent boundary layer
- §45. The drag crisis
- §46. Flow past streamlined bodies
- §47. Induced drag
- §48. The lift of a thin wing

V. THERMAL CONDUCTION IN FLUIDS

- §49. The general equation of heat transfer
- §50. Thermal conduction in an incompressible fluid
- §51. Thermal conduction in an infinite medium
- §52. Thermal conduction in a finite medium
- §53. The similarity law for heat transfer
- §54. Heat transfer in a boundary layer
- §55. Heating of a body in a moving fluid
- §56. Free convection
- §57. Convective instability of a fluid at rest

VI. DIFFUSION

- §58. The equations of fluid dynamics for a mixture of fluids
- §59. Coefficients of mass transfer and thermal diffusion
- §60. Diffusion of particles suspended in a fluid

VII. SURFACE PHENOMENA

- §61. Laplace's formula
- §62. Capillary waves
- §63. The effect of adsorbed films on the motion of a liquid

VIII. SOUND

- §64. Sound waves
- §65. The energy and momentum of sound waves
- §66. Reflection and refraction of sound waves
- §67. Geometrical acoustics
- §68. Propagation of sound in a moving medium
- §69. Characteristic vibrations
- §70. Spherical waves
- §71. Cylindrical waves
- §72. The general solution of the wave equation
- §73. The lateral wave
- §74. The emission of sound
- §75. Sound excitation by turbulence
- §76. The reciprocity principle
- §77. Propagation of sound in a tube
- §78. Scattering of sound
- §79. Absorption of sound
- §80. Acoustic streaming
- §81. Second viscosity

IX. SHOCK WAVES

- §82. Propagation of disturbances in a moving gas
- §83. Steady flow of a gas
- §84. Surfaces of discontinuity
- §85. The shock adiabat
- §86. Weak shock waves
- §87. The direction of variation of quantities in a shock wave
- §88. Evolutionary shock waves
- §89. Shock waves in a polytropic gas
- §90. Corrugation instability of shock waves
- §91. Shock wave propagation in a pipe
- §92. Oblique shock waves
- §93. The thickness of shock waves
- §94. Shock waves in a relaxing medium
- §95. The isothermal discontinuity

§96. Weak discontinuities

X. ONE-DIMENSIONAL GAS FLOW

§97. Flow of gas through a nozzle

§98. Flow of a viscous gas in a pipe

§99. One-dimensional similarity flow

§100. Discontinuities in the initial conditions

§101. One-dimensional travelling waves

§102. Formation of discontinuities in a sound wave

§103. Characteristics

§104. Riemann invariants

§105. Arbitrary one-dimensional gas flow

§106. A strong explosion

§107. An imploding spherical shock wave

§108. Shallow-water theory

XI. THE INTERSECTION OF SURFACES OF DISCONTINUITY

§109. Rarefaction waves

§110. Classification of intersections of surfaces of discontinuity

§111. The intersection of shock waves with a solid surface

§112. Supersonic flow round an angle

§113. Flow past a conical obstacle

XII. TWO-DIMENSIONAL GAS FLOW

§114. Potential flow of a gas

§115. Steady simple waves

§116. Chaplygin's equation: the general problem of steady two-dimensional gas flow

§117. Characteristics in steady two-dimensional flow

§118. The Euler-Tricomi equation. Transonic flow

§119. Solutions of the Euler-Tricomi equation near non-singular points of the sonic surface

§120. Flow at the velocity of sound

§121. The reflection of a weak discontinuity from the sonic line

XIII. FLOW PAST FINITE BODIES

§122. The formation of shock waves in supersonic flow past bodies

§123. Supersonic flow past a pointed body

§124. Subsonic flow past a thin wing

§125. Supersonic flow past a wing

§126. The law of transonic similarity

§127. The law of hypersonic similarity

XIV. FLUID DYNAMICS OF COMBUSTION

§128. Slow combustion

§129. Detonation

§130. The propagation of a detonation wave

§131. The relation between the different modes of combustion

§132. Condensation discontinuities

XV. RELATIVISTIC FLUID DYNAMICS

§133. The energy-momentum tensor

§134. The equations of relativistic fluid dynamics

§135. **Shock waves in relativistic fluid dynamics**

§136. Relativistic equations for flow with viscosity and thermal conduction

XVI. DYNAMICS OF SUPERFLUIDS

§137. Principal properties of superfluids

§138. The thermo-mechanical effect

§139. The equations of superfluid dynamics

§140. **Dissipative processes in superfluids**

§141. The propagation of sound in superfluids
